

# PULSE DISCHARGE CANDLE FILTER

## A STATE-OF-THE ART-SOLUTION FOR HIGH QUALITY FILTRATION

The Twin Filter Pulse Discharge Candle (PDC) Filter is a high-tech filter system, consisting of vertically positioned filter candles in a vertical tank. The filter candles can be supplied in polypropylene or stainless steel as standard materials. The filter medium that is used to cover the filter candles can be chosen such that a clear filtrate is instantly obtained. The cake can be discharged in solid or concentrated slurry form. Twin Filter PDC Filters can be of great service in almost any filtration process: from high-quality final filtration of liquids with a low solids content, to the primary filtration of liquids with a relatively high solids content.

Passion for Filtration

## FEATURES

- Sophisticated system
- High flow rates
- Immediate clear filtrate
- Dry or wet cake discharge
- Totally enclosed construction
- Automation
- Engineered System

## APPLICATIONS

- Mining
- Caustic / Brine
- Activated Carbon
- Vegetable Oils
- Chemicals
